Pyhä  **Kuitu**

We have the right to
**FULL BAND
FIBRE**

There are many types of Internet connections available in the market. But there is only one **WHOLE FIBRE®**, and it has been implemented with technology that works by far the best.

WHOLE FIBRE® is tailored to your needs, wherever you want to go on-line. With it you get the best customer service in Finland that will support you and answer your questions - without any delay.

TÄYSKUITU®

Reliable and uninterrupted telecommunication is an essential part of basic infrastructure of modern society, to which we all have the right, regardless our place of residence. Only fibre optic technology can guarantee this civil right.

UNLIMITED SPEED

No other means of communication is faster. Fibre optic technology transfers data at a high-speeds no other technology can match. With fibre optic connection at your home, you can be sure that you stay on data highway without speed limits.

RELIABILITY

The capacity of the fibre optic connection is not shared like mobile connections are. Large number of simultaneous mobile connection users will dramatically reduce the mobile connection speed to a fraction of the promised. The underground fibre works reliably and at full speed in all weather conditions.

FUTURE. NOW.

We all need fast and reliable Internet connection now so that we are able to use all services available for us in the world. With fibre optic technology you ensure access to services of the future. You can rest assured that with today's fibre optic technology you are able to meet the Internet connection needs of tomorrow.
